

## Opportunities for the East of England in carbon capture and storage

**client:** East of England Energy Group and the East of England Development Agency

**client brief:** Identify the key opportunities and threats for the East of England in CCS.

**our solution:** We provided a high level assessment of the opportunities for and threats to carbon capture, transport and storage in the East of England.

**description:** Element Energy examined the opportunities for CO<sub>2</sub> capture, transport and storage in and around the East of England, an area that may prove attractive for projects in this field. The study was designed to stimulate an informed debate within EEEGR, EEDA, and the wider community of stakeholders, about the suitability of CCS in the region, and how CCS opportunities should be maximised.

CO<sub>2</sub> sources in and around the East of England
